❶ Keep the same mathematical prefix

Problem: $x^2 - 5x + 6 = 0$

"The candidate roots are 2 and 3. Next, . . . "

❷ Force target experts into the selection

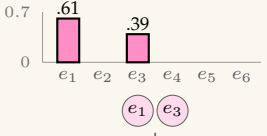
$S' = K_c \cup \mathrm{top}_{k-|K_c|}\left(p|_{\mathcal{E}\setminus K_c}\right)$

$w_e = p_e / \sum_{j \in S'} p_j$ for $e \in S'$

Same layer, six experts, native top-2

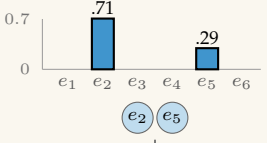
Target: Analyze

$K_c = \{e_1, e_3\}$



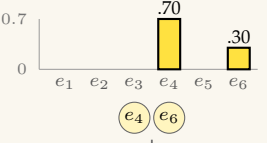
Target: Implement

$K_c = \{e_2, e_5\}$



Target: Verify

$K_c = \{e_4, e_6\}$



❸ Continue with a different reasoning action

"I compare the coefficients: the roots must sum to 5 and multiply to 6."

"I factor the polynomial: $(x-2)(x-3) = 0$, *so* $x = 2$ *or* $x = 3$."

"I test each candidate: $2^2 - 5(2) + 6 = 0$; $3^2 - 5(3) + 6 = 0$."
